New isolated nucleic acid molecule, useful for treating breast cancer, and diagnosing or monitoring the presence of metastases of breast cancer in a patient.

Claim 11; Page 355; 377pp; English.

The invention relates to a novel isolated nucleic acid molecule comprising: a sequence encoding a sequence comprising 11-1518 amino acids ; a sequence comprising 190-8144 bp; or a sequence that selectively hybridises to, or having at least 60% identity with the 11-1518 amino acid or 190-8144 nt sequence. The polypeptide and the nucleic acid are useful for treating breast cancer, and diagnosing or monitoring the presence of metastases of breast cancer in a patient. The polynucleotides of the invention can be used to treat disorders by gene therapy. This sequence represents a breast specific related polypeptide of the invention

The present invention describes human nucleic acid-associated proteins designated NAAP-1 to NAAP-57. The human NAAPs have cytostatic, antiarteriosclerotic, anti-HIV, antiallergic, cerebroprotective, antiarteriosclerotic, anti-HIV, antiallergic, cerebroprotective, antiarteriosclerotic, ophthalmological, thyromimetic, antiparasitic antiarteriotic antibacterial, virucide, protozoacide, antiparasitic and materiotide activities, and can be used in gene therapy. The NAAP protein and polynucleotide sequences can be used in diagnosing, treating and preventing diseases or conditions associated with the decreased corpression or overagression of NAAP, such as cell proliferative diseases (e.g. cancer, atherosclerosis, hepatitis), neurological disorders (e.g. cancer, atherosclerosis, hepatitis), neurological disorders (e.g. cancer, atherosclerosis, hepatitis), neurological disorders (evelopmental disorders (renal tubular acidosis, ansemia, glaucoma, hypothyroidism), autoimmune/inflammatory disorders (AIDS, allergies, atopic dermatitis, arthritis) and infections (e.g. bacterial, viral, parasitic, protozoal, fungal). The present sequence represents human NAAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a new isolated polymucleotide (I) encoding a polypeptide with biological activity comprising: a nucleotide sequence of $80 ID NOS: 1-567 (iluly defined); a mucleotide sequence that hybridizes to the sequence having greater than $9$ sequence identity with the sequence of (il). Also described are: a(n) (expression) vector comprising (I); a host cell genetically engineered to comprise (I) operatively, associated with a regulatory sequence that modulates expression of the polymucleotide in the host cell; an isolated polypeptide comprising a sequence of $80 ID NOS: 568-1134 (fully defined), where the polypeptide (I); an a polypeptide encoded by a composition comprising the polypeptide of (3) and a carrier; an antibody directed against the polypeptide of (3) and a carrier; an antibody directed against the polypeptide of (3); a method for identifying a compound that binds to the collection of polymucleotides, where the collection comprising of at collection of polymucleotides, where the collection comprising of at collection of polymucleotides, where the collection comprising any of the sequences of $80 ID NOS: 1-567. (I) is a polymucleotide comprising any of the sequences of $80 ID NOS: 1-567. (I) is a polymucleotide comprising of activity, which comprises any of the amino acid sequence of $80 ID NOS: 1-567. (I) is a polymucleotide comprising of mutations responsible for genetic disorders or types of data and products dependent on DNA and amino acid sequences. The composition and method are useful in diagnostics, forensic, and gene mapping, in identifying of mutations responsible for genetic disorders or composition and method are useful for treating a disease or disorder. C sequence of a total polypeptide of the invention. This is the amino acid sequence of a novel polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AGIASSAVEPVCGDAAPACLIRTPIRGLIKPTGPRSTMECPPALIVHPPAGGMASGSSQP 125

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes an isolated human nucleic acid (I) encoding any of 120 10-1533 residue amino acid sequences (SI), given in the specification, comprising any of 164 179-12421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung. They are also used for identifying lung tissue, monitoring and identifying and/or designing antagonists of the polypeptide of the invention, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. This is the amino acid sequence of a lung specific nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated human nucleic acid molecule and polypeptide, useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung.
                                                                                                                                                                                                                                    Human; gene therapy; vaccine; lung specific antigen; cancer diagnosis; cancer monitoring; cancer staging; cancer imaging; lung cancer; non-cancerous diseases of the lung; transgenic animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 AGIASSAVEAVCGDAAPACLLRTPLRGLLKPTGPRSTMECPPALIVHPPTGGMARRAASQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 SPHQAAAPVDQTPRTLATMGQRALPSSLALLSRPLSPPPAACSGDPGCGSGAGLPSASAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes an isolated human nucleic acid (I) encoding any of 120 10-1533 residue amino acid sequences (S1), given in the specification, comprising any of 140-12421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, invention are useful for identifying, diagnosing, monitoring staging, they are also used for identifying lung tissus, monitoring and identifying and/or designing antagonists of the polypeptide of the inng. Invention, gene therapy, production of transgenic animals and production of engineered lung tissus for treatment and research. This is the amino acid sequence of a lung specific nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 SPHQAAAPVDQTPRTLATMGQRALPSSLALLSRPLSPPPAACSGDPGCGSGAGLPSASAA 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated human nucleic acid molecule and polypeptide, useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung.
                                                                                                                      Human; gene therapy, vaccine; lung specific antigen; cancer diagnosis; cancer monitoring; cancer staging; cancer imaging; lung cancer; non-cancerous diseases of the lung; transgenic animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 SPHOAAAPVDQTPRTLATMGQRALPSSLALLSRPLSPPPAACSGDPGCGSGAGLPSASAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                  The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% to 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morphid setates. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a protein

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonuclectide complementary to the
complementary strand of a polynuclectide which comprises one of the 5602

(c) complementary strand of a polynuclectide which comprises one of the 5602

(c) c) constant sets at least 15 nucleotides; or (b) a combination

(c) an oligonuclectide comprising a sequence complementary to the
complementary strand of a polynuclectide which comprises a 5'-end

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising a sequence complementary to a

(c) sequence and an oligonuclectide comprising polynuclectides,

(c) sequence and an oligonuclectide comprises are also useful for the

(c) particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers also useful for the full-leng
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18472 represent human cDNA sequences; AAB22446 to AAB35893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               721 ALTLGLATAPSLSSSQTPGHPLLLAPTSSHVPGLNSTVAPACSPVLVPASALASPFPSAP 780
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   828 VLAPSPGAAAPVLASSQTPVPVMAPSSTPGTSLASASPVPAPTPVLAPSSTQTMLPAPVPS 887

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERAP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart control of the invention.
                                                                                                                                                                                                                                                                                             Leber's hereditary optic neuropathy; LHON; mitochondrial encephalopathy lactic acidosis and stroke; MELAS; myoclonic epilepsy ragged red fibre syndrome; MERRF; cancer; neuroprotective; nootropic; antidiabetic; anticonvulsant; antiarthritic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating with the disease.
                                                                                                                                                                                                                           Human heat mitochondrial protein as a therapeutic target SeqID2239.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gibson BW, Taylor SW, Glenn GM;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to cDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as antibodies, antibense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these molecules are useful for diagnostic markers or therapeutic targets for the various diasease or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New 1995 cDNA, useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.

as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polypeptide is a protein encoded by a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the European Patent Office, Vienna Sub-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; dithp; diagnostic and therapeutic polynucleotide; diagnosis; cancer; call proliferative disorder; autolimune disorder; inflammatory disorder; infection; hormonal disorder; metabolic disorder; neurological disorder; dastrointestinal disorder; transport disorder; connective tissue disorder; drug screening; protecome analysis; gene therapy; antisense therapy; genotyping; transgenic animal; knock in; disease model; toxicological testing; transcript imaging;

The invention relates to novel human diagnostic and therapeutic

CD polymucleotides designated dithp (ACC46080-ACC46749) and to their encoded

CC proteins (DITHP, ABRAH181-ABRAH1812). The invention also relates to

CD polymucleotide sequences at least 90% identical to the dithp cDNA

CC polymucleotide sequences at least 90% identical to the dithp cDNA

CC ransgenic organisms comprising dithp nucleic acid sequence; the

CC recombinant production of DITHP proteins; antibodies specific for DITHP

CC proteins; microarrays comprising dithp nucleic acid sequences; methods of

CC detecting dithp nucleotide and protein sequences; methods of sessing the toxicity of test compounds using a dithp hybridisation

CC diagnosis of a wide variety of conditions including cancer and other cell

CC diagnosis of a wide variety of conditions including cancer and other cell

CC diagnosis of a wide variety of conditions including cancer and other cell

CC disorders; neurological disorders; gastrointestinal disorders; transport

CC disorders; neurological disorders; gastrointestinal disorders; transport

CC disorders; and connective tissue disorders . They may also be used to

CS creen for modulators of protein activity or gene expression. DITHP

CC creen for modulators of protein activity or gene expression. DITHP

CC creel type and to induce antibodies. The dithp nucleic acids are

CC additionally useful in semation and indiported as a source of antisense sequences, as a source of antisense sequences.

CC prober and proposed and protein activity or gene therapy of the disorders in proposed and primers, and antisense sequences. The disorders in the disorders in prober and primers and primers and primers and primers.

CC prober and primers are as source of antisense sequences, as a source of antisense sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | |:||:

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
which represent the human ORFX open reading frames 1 to 3161. The ORFX
sequences have activities such as: cytostatic; hepatotropic; vulnerary;
antipsoriatic; antiparkinsonian; nootropic; neutroprotective; osteopathic;
anticonvulsant; antiarthritic; immunosuppressant; immunostimulant;
cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive;
dermatological; immunosuppressave; antiinflammatory; antibacterial;
antiviral; antifungal; antirhewmatic; antithyroid; and antianaemic. The
sequences can be used for determining the presence of or predisposition
to, or preventing or treating pathological conditions associated with an
ORFX-associated disorder. The nucleic acids can be used to express ORFX
proteins in gene therapy vectors. The proteins and nucleic acids may be
used to treat cancers, proliferative disorders, neurodegenerative
disorders opercontritis, graft vs host disease, cardiovascular disease,
catorage, systemic lupus erythematosus, severe combined immunodeficiency
(SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune
cationage anneal antiques and manages, noncturnal haemoglobinuria, antiinflammatory disease; to
enhance coagulation; to inhibit thrombosis; and as a contraceptive
                                                                                                                                                                                                                                          vulnezary; antipsoriatic; antiparkinsonian; notropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; immunosupressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; antiviral; antibacterial; antifungal; antirheumatic; antithyroid; antiviral; antibacterial; antifungal; antirheumatic; antithyroid; antianaemic; gene therapy; cancer; proliferative disorder; hypotrension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; alleryy; aplastic anaemia; nocturnal haemoglobinutia; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation;

                                                                                                                                                                                                                                                      The invention describes a method of diagnosing breast cancer in subject comprising contacting biological sample from subject with at least two different breast cancer-associated polypeptides (I) encoded by nucleic acid molecules (II) comprising sequence chosen from 42 fully defined sequences as given in specification, determining specific binding between (I) and agents in sample, where presence of the binding is diagnosing breast cancer. The method is useful for diagnosing breast cancer in a subject. The sample is blood, lymph node fluid or breast discharge fluid. This is the amino acid sequence of a breast cancer antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Snf2 related cAMP regulatory element (CREB) binding protein (CBP) activator protein, capable of co-activating CREB binding protein, useful for modulating transcription and for affecting viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is an Snf2 related CREB (cAMP regulatory element) binding protein (CBP) activator protein (SRCAP) polypeptide. It has ATPase activity and is capable of activating transcription. SRCAP polypeptides are useful for activating transcription in a cell, for enhancing CREB (cAMP regulatory element) binding protein (CBP)-mediated activation of transcription in a cell, for treating a patient having a disease involving a function such as insufficient transcription of a gene, e.g. a gene mediated by CBP co-activation, DEAD box RNA dependent
                                                                 Human; SRCAP; Snf2 related CBP activator protein; antiviral; CREB; cAMP regulatory element; CREB binding protein; CBP; ATPase; transcription activation; DEAD box RNA dependent helicase; adenoviral DBP protein; beta-actin; nuclear receptor; viral infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-DEC-2000.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human SRCAP
```

The present sequence is an Shf2 related CREB (CAMP regulatory element)

binding protein (CBP) activator protein (SRCAP) polypeptide. It has
Alpase activity and is capable of activating transcription. SRCAP

Alpase activity and is capable of activating transcription in a cell, for

enhancing CREB (CAMP regulatory element) binding protein of activation of transcription in a cell, for treating a patient having a

activation of transcription in a cell, for treating a patient having a

disease involving a function such as insufficient transcription of a

gene, e.g. a gene mediated by CBP co-activation, DEAD box RNA dependent

helicase, adenoviral DBP protein, beta-actin or a nuclear receptor

affected by SRCAP protein. Compounds that modulate SRCAP function, such

as antibodies, antisense molecules, polymucleotides or ribozymes, are

useful for treating diseases mediated by SRCAP-activated transcription,

for example, infection by adenovirus, hepatitis C virus, human

immunodeficiency virus type-1, Epstein Barr virus, cytomegalovirus or X88888888888888888888888888888888888

PIR 80:* 1: pirl:* 2: pir2:* 3: pir3:* 4: pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The genome sequence of Ustilago maydis.";
Submitted (FEB-2004) to the EMBL/Genbank/DDBJ databaee.
C-1- CAUTION: The sequence shown here is derived from an
EMBL/Genbank/DDBJ whole genome shotgun (WGS) entry which is
preliminary data.
C-2 Preliminary data.

Sequence 11382, Application US/09949016

Patent No. 681239

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHIGMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REPRENCE: LOLO01307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR APPLICATION NUMBER: 60/231,768

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

US-10-024-450-4

```
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS. AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PILING DATE: 1998-02-18
PRIOR PILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 28087
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            942 TPDVC-PSSPA--LQTPSLSSGQLPPLLIPTDPSSPPPCPPVLTVATPPPPLLPTVPLPA 998

Sequence 251, Application US/0998920

Patent No. US20020172557A1

GENERAL INFORMATION:

APPLICANT: Recipon, Herve

APPLICANT: Chen, Yongming

APPLICANT: Liu, Chenghua

TITLE OF INVENTION: Compositions and Methods Relating to Lung Specific Genes and Prot

FILE REFERENCE: DEX-0291

CURRENT APPLICATION NUMBER: US/09/989,920

CURRENT FILING DATE: 2001-11-21

PRIOR PILIANG DATE: 2000-11-22

NUMBER OF SEQ ID NOS: 284

SOFTWARE: Patentin version 3.1

LENGTH: 213
